

Global Health Courses by Department, fall 2011

ENVIRONMENTAL HEALTH SCIENCES GH COURSES	EHS 502	EHS 662	EHS 673
1. Understand definitions, concepts, and principles of the evolving concept of global health, and the policies and processes that underlie its historic development and contemporary context.			
2. Recognize how recent cultural, political-economic, and environmental trends shape health both locally and globally, with added depth in at least one world region.			
3. Effectively utilize the many global health data sets available in the public domain.			
4. Characterize local, regional and global patterns of health and disease.			
5. Develop appropriate global health interventions (e.g. policies and programs), and evaluate their impact.			
6. Demonstrate the capacity to value and promote health equity, human rights, and social and environmental justice.			

- EHS 502** **Environmental Health in Developing Areas**
EHS 662 **Methods in Nutritional Epidemiology**
EHS 673 **Epidemiology of Developmental Origins of Health and Disease**
